

Friday 22nd January Geography Research Task

The Oceans Research Task

Yesterday in Geography, you used graphs and charts to find out key characteristics of the oceans. I would like you to now choose an ocean and create a fact file using what you have learnt so far.

Task 1: Choose an ocean. Can you explain why you have chosen this ocean?

Task 2: Create an ocean fact file to explain all about that ocean. You can use the graphs and charts from your geography task or you can complete your own research.

You can complete this project however is best for you. You can complete it on a plain piece of paper, you can use a computer (Word or even PowerPoint)

Suggestions to include:

- ✓ A description of where in the world it is located.
- ✓ Characteristics for example, size, depth, temperature.
- ✓ Animals that live in that ocean. You could include pictures or drawings.
- ✓ Other interesting facts.

I look forward to learning something new from your fact files 😊
